

Support healthier indoor air quality for your family

Did you know there are **hidden risks in your home?**

Indoor air is often polluted with hidden contaminants, exposing families to harmful chemicals. Volatile organic compounds (VOCs) are invisible harmful chemicals found in everyday products posing significant health risks. Children are more vulnerable, especially indoors.¹

90%

of North Americans time is spent indoors²

2-1,000

VOC levels can be 2-1,000 times higher indoors than outdoors³

UL GREENGUARD Certification The trusted mark for low chemical emissions

UL GREENGUARD Certification helps parents identify low-emission products that meet strict chemical standards so they can prioritize the indoor air quality of their homes and create safer indoor environments for their families.

Rigorous, science-backed chemical emissions testing

25

years of emission testing experience

15,000

VOCs tested

Annual

compliance checks
